

Passionate About Innovation.

For over 30 years, Hot Spring® has led the industry in innovative design.

State-of-the-Art Controls

The IQ 2020® spa control system – the brains inside every Hot Spring spa – uses advanced technology to make our spas simple to operate. Our control panel is accessible from inside or outside the spa, and is designed for ease of use so you'll have your Hot Spring spa controls mastered in less than a minute. The 3.5" high resolution, color LCD digital screen has large text that's easy to read, especially at night. The memory feature saves your favorite customized settings, and the 10-minute clean-up cycle is a great convenience each time you exit the spa.

We spend extra time engineering our products for simplicity, so you can spend extra time enjoying your spa.

Added Convenience

The auxiliary control panel, included on most models, lets you operate your spa from another location within the spa.

The optional IQ 2020® remote lets you control all spa functions from inside the spa or inside your home.

Lighting by Design

With the Luminescence® four-zone multi-color lighting system, you can individually control each zone – underwater, bartop, pillows and water feature – to enjoy your favorite mix of colors. Or if you prefer, simply illuminate just one zone. The system also includes a color wheel sequencer that rotates through all six colors, and a dimmer setting for underwater lighting.

Moving Water

Moving water can be exceptionally calming. Our water features can be enjoyed in "tranquility mode" or with the jets activated. The unique BellaFontana® water feature creates three arcs of dancing water, and the SoothingStream® water feature delivers a gentle flow of water.
