

# Nobody Backs You **Better**<sup>®</sup>

Our global service network supports you with the finest customer care, and your Hot Spring<sup>®</sup> spa with the latest technology, so you can have ultimate peace of mind.

## A Name You Can Trust

Hot Spring spas are the spa of choice in all 50 states, Canada and more than 65 other countries. Our global network of more than 800 sales and service centers ensures a professional is always nearby to support you, before, during and after the sale. Our dealers deliver the finest in customer care with the support of DeTECHtive<sup>®</sup>, a sophisticated software tool that serves as a “personal technical adviser.”

## Simple Set-Up

Bringing home the enjoyment of a Hot Spring spa may be easier than you expect. Set-up is simple, and there’s no need for expensive construction or plumbing lines. Just fill the spa with a garden hose, plug it in\*, and turn it on. That’s all there is to it. And if you move, you can even take it with you.

Several Hot Spring models operate on 115 volts, so there’s no need for hard wiring, and electrical hook up costs are minimized. However, if your situation calls for it, every Hot Spring

model can operate on 230 volts as well and in most cases the sub-panel is included, providing an additional value. Your dealer can help you determine which voltage best suits your needs.

## So What Are You Waiting For?

Buying a Hot Spring spa is as easy as owning one. Ask your local dealer about scheduling a test soak and a backyard consultation. When you consider all the advantages of spa ownership and combine them with our advanced engineering, innovation, and dedication to energy-efficiency, quality, functionality and customer support, it all adds up to one of the smartest and most worthwhile purchases you can make for your family, your home and yourself.

We invite you to join the Hot Spring family, and to enjoy the absolute best hot tub ownership experience.

\*115 volt models only, requires a 20 amp dedicated circuit.  
In Canada, see your dealer for details.

## Efficient Pumps

In most spas, the jet pump has to tackle double duty, powering the jets at high speed and the filtration cycles at low speed. Hot Spring spas are different because the work is divided between two separate pumps. Our separate, low-amp, SilentFlo 5000® circulation pump provides continuous filtration, so the Wavemaster® jet pumps can be dedicated to producing a powerful hydromassage experience. Plus, our SmartJet® system allows you to direct the power to a specific group of jets, which means there is less horsepower required – and less energy consumed – creating a perfectly balanced hydromassage experience.

Another Hot Spring difference is our patented pump shroud that vents heat from the equipment compartment and transfers the heat back into the water, decreasing energy consumption. This also creates a cooler working environment for the motors and electronic components, contributing to a longer life for your Hot Spring spa.

## Sensational Jets.

We design our own jets so each has the power to give you an incredible massage. All our jets are completely adjustable to create just the right sensation, from powerful and invigorating to gentle and soothing.

### Moto-Massage® DX Jet

Hot Spring® revolutionized the spa industry with this innovative, moving jet. It's so comfortable, you'll enjoy resting against it for an extended, invigorating massage. Imagine two warm streams of water sweeping up and down the entire length of your back, soothing overworked muscles and loosening all the little knots of tension. *A Hot Spring Spa exclusive.*

The Comfort Control® system lets you dial in the ideal amount of air – more for stronger performance, less for a softer touch.

Our exclusive SmartJet® system lets you divert water to different combinations of jets simply by turning the ergonomically designed lever.

**Quartet® Jet System**  
Four Precision jets located above each Moto-Massage DX jet work your neck and shoulders.

**Soothing Seven® Jet**  
Seven nozzles provide treatment to your shoulders and upper back.  
*A Hot Spring Spa exclusive.*

**Hydromassage Jet**  
Select the directional nozzle for maximum performance, or the interchangeable dual-port rotary nozzle for a V-shaped, pulsating massage.

**HydroStream® Jet**  
A strong flow of water and air quickly soothes away tension.

**Precision® Jet**  
Directional and rotary nozzles deliver a therapeutic massage, especially on your calves and wrists.

**Jet-Cluster™ System**  
These systems target specific muscle groups by directing various jets to work each part of the back.

**JetStream® Jet**  
Aching lower back pain needs the extra power of this invigorating, directional whirlpool jet.

**FootWell® System**  
Our JetStream jets provide a maximum-strength foot massage.
