

# Exclusive, Innovative and Incredibly Simple Water Care

## ACE<sup>®</sup>

### Salt Water Sanitizing System

#### Diamonds are a Hot Tub's Best Friend

The optional ACE<sup>®</sup> salt water sanitizing system contains a special diamond electrode that automatically creates five different powerful and effective cleaners for your hot tub from just a small amount of salt and your spa's water. When the diamond electrode is energized, it breaks apart water molecules to create active oxygen. Active oxygen is one of the world's most effective natural cleaners and is the first way the ACE system automatically cleans the water. The active oxygen then combines with salt and other elements in the water to create chlorine and three other powerful oxidizers.

#### Automated, More Hands-Free and Easy

Since the ACE system automatically generates cleaners, you'll have fewer bottled products to measure and pour. This more hands-free approach saves you time, so it's easier than ever to care for your Limelight hot tub. To get started, just add the appropriate amount of salt to balanced water. Using the menus on the spa's main control panel, enter your spa's size and your expected use level. Simply check the sanitizer level regularly with a test strip, and confirm your use level monthly. A water care icon on the control panel lets you know that the ACE system is cleaning the water so you can relax.

#### Looks, Feels and Smells Great

The ACE salt water sanitizing system leaves your spa water sparkling clean and silky soft. The cleaners are generated from salt and water, so you're less likely to experience the dry itchy skin, irritated red eyes, or harsh odor of traditional chlorine water care.

#### Environmentally Responsible

The ACE system generates the precise amount of cleaners your Limelight hot tub requires based on its size and your use level. Since there are no excess chemicals, which often occurs with manual dosing, your hot tub water should last longer between changes. That conserves water and saves you money. When you do drain your spa, the water has less impact on the environment because fewer chemicals have been added to the balanced water.

#### Environmentally Responsible

The ACE system generates the precise amount of cleaners your Limelight hot tub requires based on its size and your use level. Since there are no excess chemicals, which often

occurs with manual dosing, your hot tub water should last longer between changes. That conserves water and saves you money. When you do drain your spa, the water has less impact on the environment because fewer chemicals have been added to the balanced water.

## EverFresh® Water Care System

Another great water care alternative is the optional EverFresh system. It starts with the FreshWater® III ozone system that generates a high concentration of ozone, working to neutralize contaminants on contact.

The FreshWater<sub>Ag</sub>® continuous silver ion purifier provides the natural sanitation power of silver ions. To complete the system, use our chlorine-free oxidizer to activate the silver ions that help refresh and polish your spa water.

The Clean Screen™ pre-filter helps ensure water is as clean as possible every time you fill your hot tub. Attach it to a garden hose to filter out organic contaminants, metals (such as copper and iron), and tannins before they are introduced into the spa water.

## Enhance Your Water Care Experience

Whether you choose the ACE salt water sanitizing system or the EverFresh water care system, you can help extend the life of your spa water and make your soaking experience even more enjoyable with two additional, innovative water care enhancements.

The Vanishing Act™ calcium remover reduces water hardness in an entirely new way. Instead of adding chemicals to the water, this product removes calcium particles, leaving the water softer and silky on your skin. Softer water reduces the need for additional chemicals, and helps protect hot tub components from damage that can result from hard water.
